SUMMARY

Software engineer with 6+ years of experience building backend systems and distributed architectures, the last four years in fintech across Latin America. Grew from founding engineer to Tech Lead at a stablecoin settlement platform, leading the architecture that settled over USD $2B in on-chain volume.

EXPERIENCE

AI/Product Engineer 2026 – Present

Zabio

- Integrated LLMs and AI agents into the onboarding and compliance (KYC) processes.
- Owned the development of a cross-platform mobile app following the Minteo–Zabio merger.
- Built automations with AI agents to remove manual steps from company processes.

Senior Software Engineer | Founding Team 2022 – 2026

Minteo (acquired by Zabio) – Fintech

- Led the design of the core settlement platform — on/off-ramps, fund disbursement, mint/burn, and the KYC/compliance module built under regulatory mandate and monthly external audits.
- Operated in production a platform that settled over USD $2B in on-chain volume across Latin America — peaking at over USD $300M in a single month — supporting more than 100,000 end users through B2B clients.
- Designed the multi-token, multi-country architecture and led the expansion to new blockchain networks, enabling a roadmap of six regional stablecoins without rewriting the core.
- Led a team of four to five engineers for over three years, reporting directly to the CTO.

Software Engineer 2021 – 2022

Cóndor Labs

- Implemented a Redis caching layer over a B2B SaaS product's heaviest queries, cutting endpoint latency.
- Built CI/CD pipelines on GitHub Actions for the client's backend services, eliminating manual deploys.

Software Engineer 2021 – 2022

Arvolution – Healthtech

- Built Python ETL workflows on AWS Lambda feeding regulatory reports for clients such as Bavaria.
- Implemented GraphQL APIs exposing incident and operational data to the product's frontends.

Software Engineer 2020 – 2021

TuProp – Proptech

- Helped build the company's application MVP end-to-end, across the frontend and a GraphQL backend.
- Integrated the OpenStreetMap API to power maps and geolocation in the property search experience.
- Built web scrapers and ETL pipelines with Puppeteer to populate the property catalog.

PROJECTS

Real-Time Colombian Sign Language Detection

- Built a CNN-based system translating Colombian Sign Language gestures from camera into synthesized speech.

SKILLS

Languages: TypeScript, Python

Frameworks: Fastify, FastAPI, React, Next.js, GraphQL

Cloud & Infra: AWS, Kubernetes, Docker, Terraform, CI/CD pipelines

Async Processing: Temporal.io, Message Queues

Databases: PostgreSQL, DynamoDB, Redis

Architecture: Event-driven, Serverless

AI: LLMs, AI Agents, LangGraph, LangFuse
